

## Home Energy Audit

The City of Wellington is now offering home energy audits to our customers. Customers can call and schedule a time for a crew to come to your home and get the necessary information.

### Some examples of the information needed

- Dimensions of the home, windows, and doors
  - The amount of insulation in attic/walls
  - Type and age of heating and cooling system
  - Daily habits such as thermostat settings
- Amount of washing and hot water consumption
  - Number of occupants
  - Condition of windows and doors

This information will then be entered into the home energy audit program. Once the program is completed it will give the customer an analysis consisting of recommended improvement areas and potential savings. You will receive a report at the time of return with an explanation of suggested recommendations. You must own the home and it should be at least ten years old.

Audits will be conducted as time allows for crews to be scheduled.

### **Some benefits of a home energy audit.**

- Can I save money and how much by adding insulation to my walls and ceiling?
  - Can I save by installing storm windows and doors?
  - Can I save by upgrading my current heating and air system?
  - How much can I save by installing all energy saving appliances?
- Just bought a home? Want to know where it stands on energy consumption?

Note: This is a computer based program and all results of the energy audit are only suggested recommendations. For more information and to schedule an appointment contact Wellington electric distribution warehouse @ 326-7211
